

Digital-6 Receiver Receivers

Gentner's Digital-6 Receiver is a highly versatile assistive listening device with six user-selectable preset channels. It is small, attractive, durable, and easy to use.

Gentner's Digital-6 Receiver provides the best sound quality for hearing assistance and may be digitally tuned to any of the 37 FCC approved assistive listening frequencies. The digital tuning processor ensures the receiver is locked on to a particular frequency regardless of normal changes in temperature, humidity, or rough handling.

The six preset channels offer the user multiple choices that can easily be changed in a variety of situations. This is ideal for applications that have multiple audio sources such as multiplex movie theatres, classrooms, or multi-lingual worship services. The receiver is tunable to all available assistive listening channels.

The Digital-6 Receiver uses a single set of standard AA batteries for extended battery life and can run for 40 hours or longer.

A wide variety of accessories are available for the Digital-6 Receiver including a variety of earbuds and ear-phones to suit most every hearing need.

Each Digital-6 Receiver includes a wrist strap, belt/pocket clip, and a single earbud.

Features and Benefits

- Digitally tuned to lock on to desired frequency
- Six user-selectable preset channels to easily switch between audio sources
- Wide area FM system works outdoors or in bright light with no line of sight restrictions
- Extra-long battery life (40+ hours), uses two AA batteries
- Elegant, simple design makes it easy to use by virtually anyone
